Time allowed for this section

Reading time before commencing work:

five minutes

Working time:

fifty minutes

Number of additional
answer booklets used
(if applicable):

--

Materials required/recommended for this section

To be provided by the supervisor

This Question/Answer booklet

Formula sheet

To be provided by the candidate

Standard items: pens (blue/black preferred), pencils (including coloured), sharpener,
correction fluid/tape, eraser, ruler, highlighters

Special items: nil

Important note to candidates

No other items may be taken into the examination room. It is **your** responsibility to ensure that you do not have any unauthorised material. If you have any unauthorised material with you, hand it to the supervisor **before** reading any further.

Structure of this paper

Section	Number of questions available	Number of questions to be answered	Working time (minutes)	Marks available	Percentage of examination
Section One: Calculator-free	8	8	50	52	35
Section Two: Calculator-assumed	13	13	100	98	65
Total					100

Instructions to candidates

- The rules for the conduct of examinations are detailed in the school handbook. Sitting this examination implies that you agree to abide by these rules.
- Write your answers in this Question/Answer booklet preferably using a blue/black pen. Do not use erasable or gel pens.
- You must be careful to confine your answers to the specific question asked and to follow any instructions that are specific to a particular question.
- Show all your working clearly. Your working should be in sufficient detail to allow your answers to be checked readily and for marks to be awarded for reasoning. Incorrect answers given without supporting reasoning cannot be allocated any marks. For any question or part question worth more than two marks, valid working or justification is required to receive full marks. If you repeat any question, ensure that you cancel the answer you do not wish to have marked.
- It is recommended that you do not use pencil, except in diagrams.
- Supplementary pages for planning/continuing your answers to questions are provided at the end of this Question/Answer booklet. If you use these pages to continue an answer, indicate at the original answer where the answer is continued, i.e. give the page number.
- The Formula sheet is not to be handed in with your Question/Answer booklet.

DO NOT WRITE IN THIS AREA AS IT WILL BE CUT OFF

Section One: Calculator-free

35% (52 Marks)

This section has **eight** questions. Answer **all** questions. Write your answers in the spaces provided.

Working time: 50 minutes.

Question 1

(5 marks)

In order to fit a building on a small plot of land, the plan of its concrete slab $PQRS$ is trapezoidal with right-angled corners at R and S . In the diagram shown PS is 3 m longer than QR , QR is 7 m and RS is 4 m.

- (a) Determine the area of the slab $PQRS$. (2 marks)
- (b) Before pouring the concrete the edge of the entire slab is surrounded with formwork at a cost of \$20 per metre.
Determine the cost of the formwork for the slab $PQRS$. (3 marks)

Question 2**(5 marks)**

Evaluate the following:

(a) $4 + 5 \times 10.$

(1 mark)

(b) $12 \div 6 - 5 \times \frac{1}{2}.$

(2 marks)

(c) $\frac{\sqrt{3x+4}}{(x-2)^2}$ when $x = 7.$

(2 marks)

DO NOT WRITE IN THIS AREA AS IT WILL BE CUT OFF

Question 3**(7 marks)**

When investigating the costs associated with running a 125cc motorbike, a student estimated the following figures for their budget.

Expense	Frequency	
	Monthly (\$)	Half-yearly (\$)
Servicing		90
Registration		60
Insurance		48
Loan repayment	124	
Fuel	85	
Wax and polish	44	

- (a) Briefly explain what the term 'fixed spending' means in relation to a budget and give an example that could apply to the running costs of a motorbike. (2 marks)
- (b) Briefly explain what the term 'discretionary spending' means in relation to a budget and give an example that could apply to the running costs of a motorbike. (2 marks)
- (c) Use the figures in the table to determine if a monthly budget of \$350 is enough to cover the running costs of the motorbike. (3 marks)

Question 4**(6 marks)**

A spreadsheet contains the following values:

	<i>A</i>	<i>B</i>	<i>C</i>	<i>D</i>	<i>E</i>
1	6.5	7.75	6.25	10.25	9.25
2					
3	4.2	4.5	6.2	8.4	9.6
4					

The following formulas are to be used to calculate the value in cell *A2* and the value in cell *A4*:

$$A2 = (A1 + B1 + C1 + D1 + E1) \div 5$$

$$A4 = (0.5 \times A3 + B3 + C3 + D3 + 0.5 \times E3) \div 4$$

(a) Determine the value in cell *A2*. (2 marks)

(b) Determine the value in cell *A4*. (2 marks)

(c) The value in cell *C1* increased by 15. Determine the change in value of cell *A2*. (2 marks)

Question 5

(7 marks)

When designing an electrical circuit, an engineer uses the table below to determine F , the latency factor. R is the number of resistors and C is the number of capacitors in the circuit.

F		R				
		3	4	5	6	7
C	4	0.33	A	0.49	0.60	0.73
	5	0.39	0.46	0.55	0.66	0.79
	6	0.45	0.52	0.61	0.72	0.85
	7	0.51	0.58	0.67	0.78	0.91
	8	0.57	0.64	0.73	0.84	B

(a) Determine

(i) F when a circuit has 5 resistors and 7 capacitors. (1 mark)

(ii) R when a circuit with 4 capacitors has a latency factor of 0.73. (1 mark)

The formula used to calculate the latency factor is $F = \frac{R^2 + 6C}{100}$.

(b) Determine the value of A and the value of B shown in the table. (2 marks)

(c) Circuit P has 6 resistors and 11 capacitors and circuit Q has 8 resistors and 8 capacitors. Determine, with justification, which circuit has the highest latency factor. (3 marks)

Question 6**(7 marks)**

An investor owned 700 shares in two companies, as shown in the table below.

Company	Number of shares	Current market value of share	Dividend per share	Dividend per share
HHA	500	\$6.00	—	3%
MMJ	200	\$2.50	60c	—

- (a) Determine the total market value of these shares. **(2 marks)**

- (b) Both companies are about to pay dividends to shareholders. Determine the total dividend that the investor will receive. **(3 marks)**

- (c) Calculate the percentage dividend per share (the dividend yield) for the MMJ company. **(2 marks)**

Question 7

(8 marks)

Consider the matrices $A = \begin{bmatrix} 5 & -2 \end{bmatrix}$, $B = \begin{bmatrix} -2 & 1 \\ 3 & 4 \end{bmatrix}$ and $C = \begin{bmatrix} -3 & -1 \\ 2 & 0 \end{bmatrix}$.

(a) Calculate

(i) $B + 4C$.

(1 mark)

(ii) AC .

(2 marks)

(iii) B^2 .

(2 marks)

(b) Given that $3B - C + xI = \begin{bmatrix} h & 4 \\ 7 & 20 \end{bmatrix}$, where I is the identity matrix, determine the value of the constant x and the value of the constant h . (3 marks)

DO NOT WRITE IN THIS AREA AS IT WILL BE CUT OFF

Question 8**(7 marks)**

A young person qualifies for a government allowance of \$450 per fortnight, provided their fortnightly income is no more than \$430.

In any fortnight that a person earns more than \$430, the allowance will be reduced by 50 cents in the dollar for earnings over \$430 and up to \$530, and reduced by 60 cents in the dollar for earnings over \$530.

A person who qualifies for the allowance earns \$30 per hour working in an office. Each week they work 5 hours on Tuesday and 4 hours on Wednesday.

(a) Calculate their fortnightly earnings. (2 marks)

(b) Determine their fortnightly government allowance. (3 marks)

(c) Determine the reduction in the fortnightly government allowance calculated in part (b) if they worked an extra 5 hours every Monday. (2 marks)
